

✓ Assignment 02

Given on 6th August 2024

Q1. Define a procedure that prints histogram() which takes in a list of integers and prints a histogram to the screen. For example, it should print the following if histogram([4,9,7])

```
def histogram(L):
    for i in range(len(L)):
        print(L[i]*' '*i)
```

```
L = list(map(int, input().split()))
print('Histogram is the following')
histogram(L)
```

```
⇒ 4 9 7 8 1
   Histogram is the following
   ****
   *****
   *****
   *****
   *
```

Q2. Count the number of alphanumeric characters and the number of words

```
s = input()

alphanum = 0
words = 1

for i in s:
    if i != ' ':
        alphanum += 1
    else:
        words += 1

print('Number of alphanumeric characters = ',alphanum)
print('Number of words = ',words)
```

```
⇒ This is Soham, a PG student studying Big Data Analytics
   Number of alphanumeric characters = 46
   Number of words = 10
```
